### Question 1:

[View this Question Online >](#)

You are going to read a text. Some sentences are missing from the text. Choose from the list (A-C) the most appropriate sentences to complete the text. There is also an extra sentence that you do not need to use.

In the Mediterranean Sea, Italian fishermen rescue an American adrift with two gunshot wounds in his back. They tend to his wounds and find he has no memory of his identity, but retains his speech, advanced combat skills and fluency in several languages. 1) \_\_\_\_\_. Upon landing in Imperia, Italy, the American goes to the bank in Switzerland to investigate the deposit box. 2) \_\_\_\_\_. The man takes everything but the gun, using the name on the American passport, 'Jason Bourne'.

- A. He finds it contains money in various currencies, passports and identity cards with his picture on them, and a handgun.
- B. After Bourne's departure, a bank employee contacts Operation Treadstone, a CIA black ops program.
- C. The skipper finds a laser projector under the man's hip that gives the number of a safe deposit box in Zürich.

1. 1A 2C

2. 1B 2C

3. 1C 2A

4. 1C 2B

### TCS NQT Questions Question 1 Detailed Solution

The correct answer is '1C 2A'.

#### Key Points

- **Blank (1):**
  - The para starts with fishermen rescuing an American who has no memory of himself.
  - In 'C', it's mentioned that the skipper (=the captain of a ship or boat, a sports team, or an aircraft) found a laser projector having a number of a safe deposit box.
  - 'A' and 'B' don't fit in the blank.
  - It's clear 'C' fits in the blank perfectly.
- **Blank (2):**
  - The man with that number reaches the bank.
  - 'A' connects the previous statement by describing what he got in the box at the bank.
  - It's clear that 'A' fits in the blank perfectly.

Therefore, the **correct** answer is **option 3).**

**Complete paragraph:** In the Mediterranean Sea, Italian fishermen rescue an American adrift with two gunshot wounds in his back. They tend to his wounds and find he has no memory of his identity, but retains his speech, advanced combat skills and fluency in several languages. **The skipper finds a laser projector under the man's hip that gives the number of a safe deposit box in Zürich.** Upon landing in Imperia, Italy, the American goes to the bank in Switzerland to investigate the deposit box. **He finds it contains money in various currencies, passports and identity cards with his picture on them, and a handgun.** The man takes everything but the gun, using the name on the American passport, 'Jason Bourne'.

## Question 2:

[View this Question Online >](#)

You are going to read a text about problems of agriculture sector. Some sentences are missing from the text. Choose from the list (A-C) the most appropriate sentences to complete the text. There is also an extra sentence that you do not need to use.

Employing a little less than half the work force, agriculture makes up around 15% of the economy. 1) \_\_\_\_\_. Fragmentation of land holdings and low yields are long standing problems. 2) \_\_\_\_\_. So far, government's stock response has been to announce higher support prices or waive loans. Recent experience shows that these responses are at best palliatives. Structural reforms are the need of the hour.

- A. To add to them a new one has arisen: climate change.
- B. The size of the pie here is very small
- C. The demands of the farmers may be specific to Maharashtra but the underlying problems and their symptoms are visible across the country.

1. 1A 2B

2. 1B 2A

3. 1A 2C

4. 1C 2A

## Answer (Detailed Solution Below)

Option 2 : 1B 2A

## TCS NQT Questions Question 2 Detailed Solution

The correct answer is '1B 2A'.

• **Blank (1):**

- The paragraph starts with the writer introducing the topic by stating that agriculture makes for a little less than 50% workforce and forms 15% of the economy. Then there is the blank:
- 'C' talks about some demands of farmers of Maharashtra, but it **doesn't fit well in the blank**.
- 'A' talks about an addition to something referred by 'them'. We **don't know what the writer is referring to**. So, it can't come in the blank.
- 'B' further extends the discussion that 'the Pie (=profit) in the agriculture is very small'. This sentence introduces a problem for the sector. Also, the sentence followed by the blank explains more problems.
- Therefore, 'B' fits in the blank very well.

• **Blank (2):**

- The sentence preceding the blank mentions some **serious issues** related to agriculture; i.e. **Fragmentation of land holdings and low yields**.
- 'A' is **contextually fit** as it **adds another problem of climate change**.
- Therefore, 'A' should be filled in the blank.

Therefore, the **correct** answer is **option 2**).

**Complete sentence:** Employing a little less than half the work force, agriculture makes up around 15% of the economy. **The size of the pie here is very small.** Fragmentation of land holdings and low yields are long standing problems. **To add to them a new one has arisen: climate change.** So far, government's stock response has been to announce higher support prices or waive loans. Recent experience shows that these responses are at best palliatives. Structural reforms are the need of the hour.

If Rs. 76 is divided into 7 : 5 : 3 : 4, then the smallest part is :

1. Rs. 12

2. Rs. 16

3. Rs. 15

4. Rs. 11

**Answer** (Detailed Solution Below)

Option 1 : Rs. 12

### TCS NQT Questions Question 3 Detailed Solution

**Given:**

Total amount = Rs. 76

Ratio of share = 7 : 5 : 3 : 4

**Concept used:**

Ratio and proportion

**Calculation:**

The smallest part =  $76 \times \frac{3}{19}$

$\Rightarrow$  Rs. 12

$\therefore$  The smallest part is Rs. 12

What is the value of the ((Start  $\rightarrow$  Next)  $\rightarrow$  Next)  $\rightarrow$  Info in the given list?

1. 140

2. 130

3. 125

4. 128

**Answer** (Detailed Solution Below)

Option 4 : 128

### TCS NQT Questions Question 4 Detailed Solution

**Concept:-**

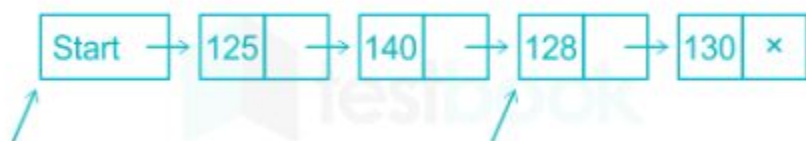

**Single linked list:**

This list consists of a number of nodes in which each node has a next pointer to the following element. The link of the last node in the list is NULL, which indicates the end of the list.

**Calculation:-**

- The Start is the head pointer points to the first node which holds value 125.
- Now the Start→Next points to the address of the second node which holds the value 140.
- Start→Next→Next points to the address of the third node which holds the value 128.

After performing ((Start → Next) → Next) the current link transfer to the third node of linked. And Third node data value is 128.

Hence the correct answer is 128.

Mock Tests

**Question 5:**[View this Question Online >](#)

In a mixture of 100 liters solution, the ratio of acid and water is 3 : 1. How much amount of water must be added to the mixture, then the ratio becomes 3 : 4.

1. 100 litres

2. 80 litres

3. 75 litres

4.

70 litres

**Answer** (Detailed Solution Below)

Option 3 : 75 litres

**TCS NQT Questions Question 5 Detailed Solution****⚡ Shortcut Trick**

Initial quantity = 3 : 1

Final quantity = 3 : 4

} Difference = 3

Hence, difference 3 =  $\frac{100}{(3 + 1)} \times 3 = 75$  litres

∴ The amount of water that must be added in the mixture is 75 litres.

**Traditional method:****Given:**

The total quantity of the mixture is 100 liters

The ratio of acid and water is 3 : 1

### Calculations:

Let the added amount of water be x litres

According to the question, we have

The ratio of acid and water is 3 : 1

Quantity of acid the mixture is

$$\Rightarrow \text{Quantity of acid} = \frac{100}{(3+1)} \times 3$$

$$\Rightarrow \text{Quantity of acid} = 75 \text{ liters}$$

Quantity of water in the mixture is

$$\Rightarrow \text{Quantity of water} = \frac{100}{(3+1)} \times 1$$

$$\Rightarrow \text{Quantity of water} = 25 \text{ liters}$$

Now, Amount of added water in the mixture is

$$\Rightarrow \frac{75}{(25+x)} = \frac{3}{4}$$

$$\Rightarrow 300 = 75 + 3x$$

$$\Rightarrow 3x = 225$$

$$\Rightarrow x = 75 \text{ litres}$$

**$\therefore$  The amount of water that must be added in the mixture is 75 litres.**

### Alternate Method

The initial ratio of acid and water is 3 : 1

The ratio after adding water is 3 : 4

According to the question, we have

| Quantity of milk        | Quantity of water              |
|-------------------------|--------------------------------|
| 75 litres               | 25 litres                      |
| 75 litres               | 100 litres                     |
| Quantity of added water | $100 - 25 = 75 \text{ litres}$ |

**$\therefore$  The amount of water that must be added in the mixture is 75 litres.**

### Question 6:

[View this Question Online >](#)

Consider the given question and decide which of the following statements is/are sufficient to answer the question.

'Who is the youngest among Reema, Usha and Naina?'

#### Statements :

1. Veena is younger than Usha but older than Reema,
2. Reema's younger sister has the same date of birth as Naina.

1. Both statements are not needed.

2. Both statements together are sufficient

3. Statement 1 alone is sufficient.

4. Statement 2 alone is sufficient.

### Answer (Detailed Solution Below)

Option 2 : Both statements together are sufficient

### TCS NQT Questions Question 6 Detailed Solution

#### Statements :

1. Veena is younger than Usha but older than Reema.

Usha > Veena > Reema

2. Reema's younger sister has the same date of birth as Naina.

Naina = Reema's younger Sister

Means;

Reema > Reema's younger sister = Naina

Reema > Naina

Reema > Naina

From both the statements;

Usha > Veena > Reema > Naina

So, Naina is the youngest among Reema, Usha, and Naina.

Hence, **Both the statements together are sufficient.**

### Question 7:

[View this Question Online >](#)

Determine the output of the given program.

```
main()
{
    int i = 8;
    while (i = 8)
    {
        printf("Getting out");
        i++;
    }
}
```

1. Getting out is printed infinite times

2. Nothing is printed

3. Getting out is printed once

4. Getting out is printed 7 times

## Answer (Detailed Solution Below)

Option 1 : Getting out is printed infinite times

### TCS NQT Questions Question 7 Detailed Solution

#### Concept:

##### while loop:

Statements within the while loop would keep getting executed till the condition being tested remains true. When condition becomes false, control passed to the first statement that follows body of the loop. While loop will be executed atleast 0 times.

##### Syntax:

Initialize loop counter;

While(**condition**)

{

Statement;

Increment loop counter;

}

##### Calculation:

main()

{

int i = 8;

while (i = 8)

{

printf ("Getting out");

i++;

}

}

- When  $i = 8$ , as the condition is satisfied, the print will display Getting out in the output.
- Now after incrementing  $i$  to 9, the while loop gets completed.
- Again  $i$  is assigned 8 and again while loop will be executed.
- So this process will keep on running infinite times, **hence Getting out is printed infinite times.**

#### Explanation :

The program contains an infinite loop because the **condition** in the while statement, " $i = 8$ ", is an

assignment statement that always evaluates to true. This means that the loop will continue to execute indefinitely, and "Getting out" will be printed repeatedly.

To fix this program and prevent it from entering an infinite loop, the condition in the while statement should be changed to a comparison using the equality operator "=", like this:

```
main() {  
    int i = 8;  
    while (i == 8) {  
        printf("Getting out");  
        i++;  
    }  
}
```

With this change, the program would print "Getting out" once and then exit the loop, because the value of "i" would be incremented to 9, making the condition in the while statement false.

Hence **option(1)** is the correct answer.

### Confusion Points

- The condition inside the while( ) loop is not using the relational operator (==) which is used to compare the value, but it is using an assignment operator (=).
- Therefore when the variable **i** is assigned with value 8 in the while condition, the condition returns true, and the program enters into the while loop.
- Now the **i** is get incremented using **i++**, after that the program will check the while condition and this time also the **i** is assigned with value 8 and the while loops runs successfully.
- Continuously the while loop will get run due to this condition, as there is no termination because each time the condition returns true.
- If the condition were like while (i==8), and the value of i is already 8 by int i = 8, So it will return true and enter into a loop, but then the **i** will gets incremented by 1 inside the while loop, and then for i=8, the conditions return false.

#### Question 8:

[View this Question Online >](#)

What would be the output of the given program?

```
#include
```

```
using namespace std;
```

```
void fun1(int x)
```

```
{
```

```
cout<
}
int main()
{
//function calling
fun1(10,20);
return 0;
}
```

1. 10
2. Compile time error
3. 10, 20
4. Run time error

**Answer** (Detailed Solution Below)

Option 2 : Compile time error

### TCS NQT Questions Question 8 Detailed Solution

**Answer:** Option 2

**Explanation:**

in this function call

**fun1(10,20);**

2 argument being passed to the function fun1 but fun1 definition is

void fun1(int x)

```
{
cout<
}
```

Only one parameter being accepted in the fun1's definition.

**Hence this will be a compiler time error.**

the correct fun1 definition will be

```
void fun1(int x, int y)
```

```
{
```

```
cout<
```

```
}
```

### Question 9:

[View this Question Online >](#)

**Direction-** Given are four sentence-paragraphs (S1-S4). S1 and S4 are given. From the given options (P, Q, R), choose two sentences which can be S2 and S3.

**S1:** Even if Senators agree that Trump's conduct doesn't meet the legal standard for incitement,

**S2:** \_\_\_\_\_

**S3:** \_\_\_\_\_

**S4:** Senator Susan Collins, a Republican from Maine, told reporters Tuesday.

**P:** "I'm not going to pre-judge the evidence that the House will present,"

**Q:** they could still decide to convict him in the impeachment trial.

**R:** Asked if she thought Tuesday's procedural vote was indicative of what the final trial result would look like, Collins said,

1. PQ

2. QR

3. RP

4. QP

## TCS NQT Questions Question 9 Detailed Solution

The correct answer is 'QP'.

### Key Points

- In order to arrange the parts of the paragraph, we will have to establish **grammatical connections** between the given statements.
- Let's see how the parts of the paragraph can be arranged properly.
  - Sentence '**S1**' establishes the subject matter.
  - Sentence '**Q**' will follow '**S1**' because it is **in further continuation of S1**.
  - The statement is further telling that the Senators could still decide to convict Trump in the impeachment trial.
- Thus, the sentence '**Q**' will be '**S2**'.
- Of the remaining alternatives, sentence '**P**' will precede S4 as it is what Senator Susan Collins told the reporters.
- The sentence '**P**' will be '**S3**' as it is the beginning of the statement '**S4**'
- Thus, the **correct order** is '**S1QPS4**'
  - S1:** Even if Senators agree that Trump's conduct doesn't meet the legal standard for incitement,
  - S2:** they could still decide to convict him in the impeachment trial.
  - S3:** "I'm not going to pre-judge the evidence that the House will present,"
  - S4:** Senator Susan Collins, a Republican from Maine, told reporters Tuesday.

### Additional Information

- **Incitement** is the action of provoking unlawful behaviour or urging someone to behave unlawfully.
  - **For eg.-** This amounted to an **incitement** to commit murder.

### Question 10:

[View this Question Online >](#)

There are three co-prime numbers, the product of first two numbers is 221 and product of last two numbers is 598. What will be the sum of all numbers?

1. 86

2. 46

3. 96

4. 76

**Answer** (Detailed Solution Below)

Option 4 : 76

### TCS NQT Questions Question 10 Detailed Solution

**Given:**

Product of first two numbers = 221

Product of last three numbers = 598

**Calculation:**

Let the numbers be a, b, and c

According to question  $ab = 221$  and  $bc = 598$

$$ab/bc = 221/598$$

$$\Rightarrow a/c = 17/46 \quad (\text{SIMPLIFIED BY 13})$$

As the numbers are co-prime

$$a = 17 \text{ and } c = 46$$

$$\text{As, } ab = 221$$

$$\Rightarrow 17 \times b = 221$$

$$\Rightarrow b = 221/17$$

$$\Rightarrow b = 13$$

Then numbers are 17, 13, and 46

Sum of all numbers =  $17 + 13 + 46 = 76$

**$\therefore$  Sum of all numbers is 76**
